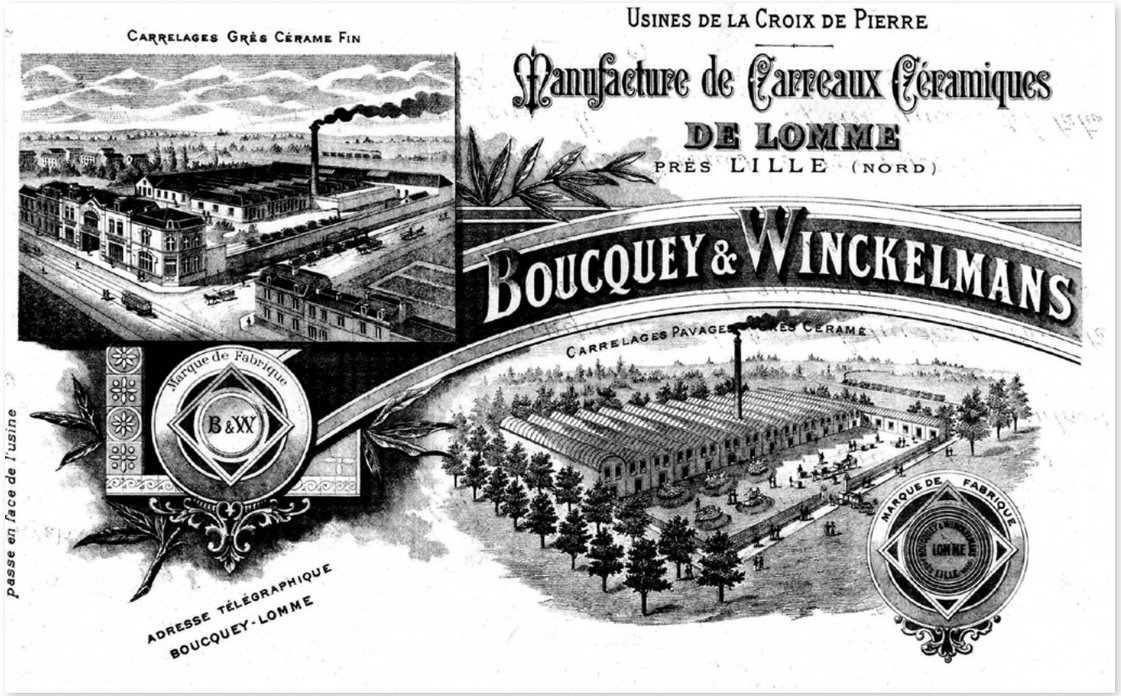
TILES FROM GENERATION TO GENERATION

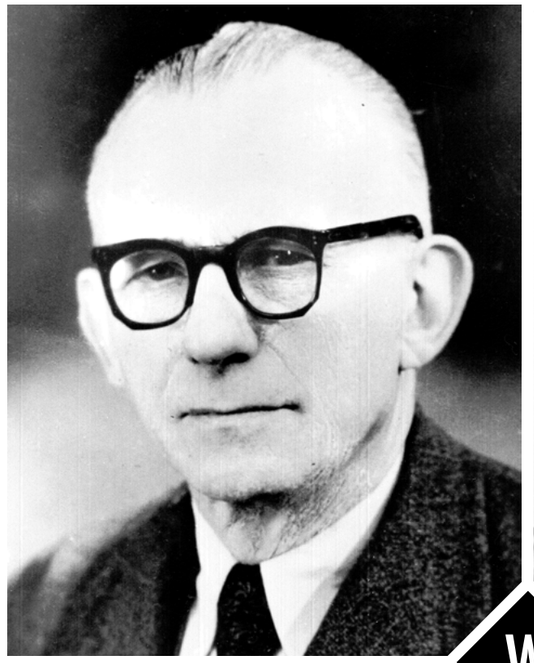


passe en face de l'usine

Everything started for Théophile Winckelmans in 1894 when he opened his unglazed tile factory in Lomme in Northern France (Lille).
The plan, from the very beginning, was to offer elegant, aesthetic and customisable products that were also versatile and technical.

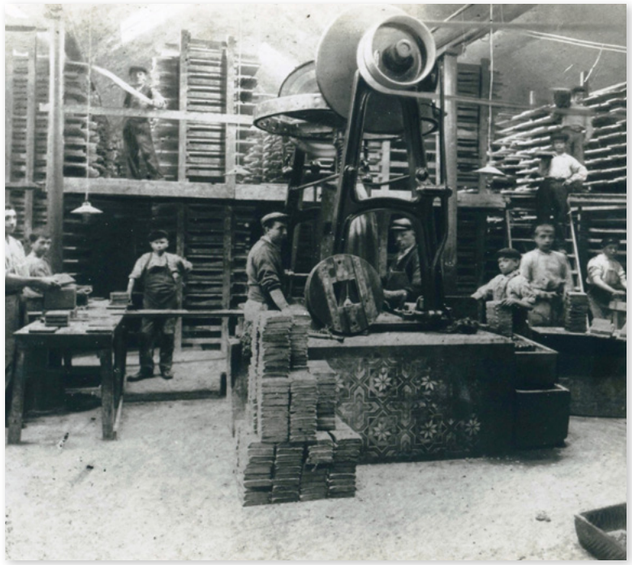
Every generation had their challenges, including the terrible bombing of the workshops in 1944 which were then rebuilt, the radical changes in trends in the early 80s, the start of export or the modernisation of our workshops in the 2000s. All challenges faced and met by every generation without ever losing sight of the founder's vision and the factory's original spirit.

Almost 130 years and 5 generations later, the Winckelmans factory still stands proud on its original site and has grown thanks to a second French production site in Decize, in Burgundy.



Ryans www.ryans.nl | Laag-Keppel

A FACTORY ANCHORED IN TRADITION



The Winckelmans factory has been awarded the French Living Heritage Business label thanks to its attachment to traditional production methods that place manual craftsmanship at the heart of its activity. It exports its small tiles all over the world.

Faithful to its founder's vision, Winckelmans offers exclusive French production with unchanging prerequisites: natural raw materials, handing down of traditional know-how from generation to generation, and a constant attention to detail to be able to offer highly technical products that are also pleasing to the eye and in line with late 19th century production.

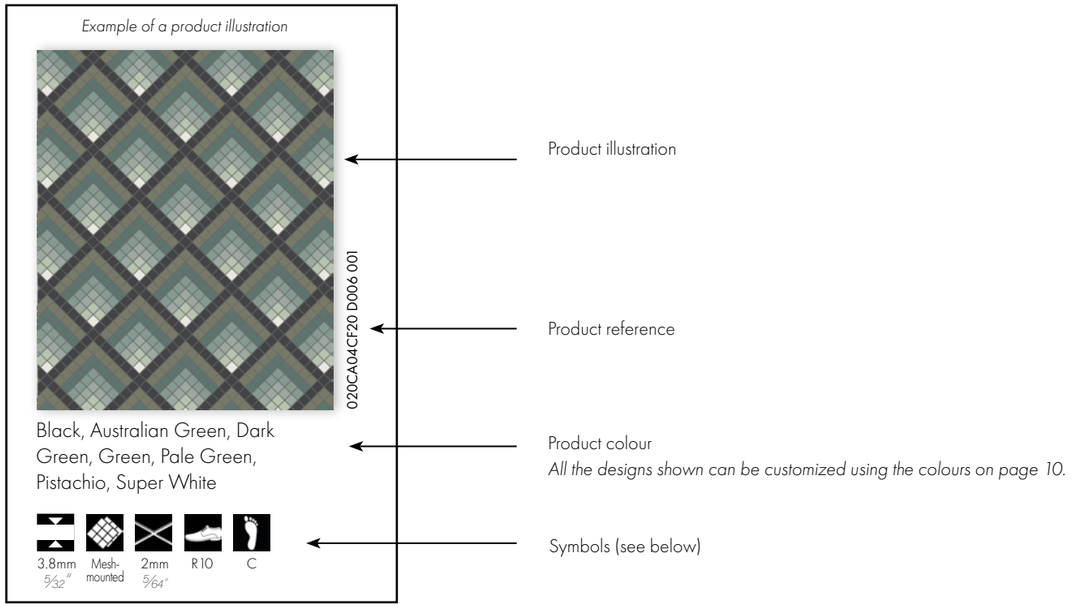
HOW TO USE THIS CATALOGUE

UNDERSTANDING THE SYMBOLS



THICKNESS

3.8mm 5/32" | 5mm 13/64" | 9mm 23/64"

Thickness varies from one format to another. We recommend selecting formats of same thickness if different patterns or formats are to be combined on the same surface.

SLIP STANDARDS

Our tile slip rating is assessed using two types of standard (DIN 51130 and DIN 51097). The R value is used when footwear is worn, whereas the A/B/C value is important for wet rooms (bathrooms or swimming pools) where people walk in bare feet.

Slip rating wearing footwear		Slip rating in bare feet	
R9	Normal adherence	A	Medium adherence
R10	Medium adherence	B	High adherence
R11	High adherence	C	Very high adherence
R12	Very high adherence		

SUPPLY TYPE

Mesh-mounted — Indicates that a design is supplied pre-assembled on sheets (using fibre or paper) for easier laying.

Loose — Order supplied as loose tiles.

GROUT SIZE

Indicates the standard grout size in mm.

0mm* 0" | 1mm 3/64" | 1.5mm 1/16" | 2mm 5/64" | 2.5mm 3/32" | 3mm 1/8"

**Some designs and borders are prepared edge to edge (0mm (0") grout line) and may not be suitable for all types of project.*

THE VISUALIZER

https://www.winckelmans.com/visualizer

ENCAUSTICS

Colour customisation

Every part of the tiles on this page can be customised using the plain colour range.
Customised product pictures showing your selected colours are available on request.

Pattern creation or reproduction

We can offer much more than just the tiles shown in this catalogue, feel free to send us your requests to reproduce existing patterns. Entirely new patterns can also be created!

A history of Victorian floors

Emblematic of Victorian architecture from the 1860s, geometric tile floors became increasingly popular as they began to appear in large Victorian villas, public and religious buildings in the United Kingdom, so much so that by the 1890s, tiled floors and hallways had become an essential element of the most ordinary Victorian houses from Dover to Edinburgh.

The sign of ancestral know-how, many tiled geometric floors have survived over 150 years of wear and are as splendid today as when they were first laid.

Specialised in the restoration of these century-old floors, Winckelmans proposes an authentic range in the continuity of period production by its colours, finishes and formats, and contributes to perpetuating this heritage.

Important information

Pre-assembled modules
All our designs and borders are supplied in pre-assembled modules to make laying easier.

No standard grout space
As our designs and borders are prepared edge to edge and supplied without a standard grout width, they may not be suitable for all types of project.
Please note that the use of a grout is still needed to fill even the tiniest spaces between the individual tiles.

How to create a Victorian design

1. DESIGNS
Choose a design (pages 112 to 131).

2. BORDER
Choose a border (pages 132 to 137).

3. ANGLE
Choose a standard corner of the same width as the border (page 136).

Important note: The use of standard corners is strongly recommended for more flexibility when laying.

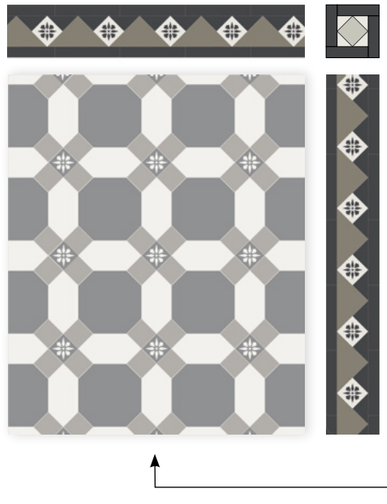
BORDERS

How to compose a Victorian border

OPTION A: BORDER WITH STANDARD CORNER

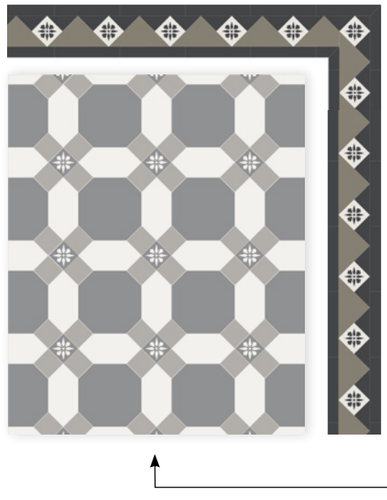


BENEFITS
Makes it possible to adapt the border to any size design.

TECHNICAL CONSTRAINTS
Requires cutting the border on each side of the corner.

Important note: The use of standard corners is strongly recommended for more flexibility when laying.

OPTION B: BORDER WITH CONTINUOUS CORNER



BENEFITS
Guarantees border continuity all around the design.

TECHNICAL CONSTRAINTS
For the corners to be harmonious in every corner, adjusting the dimensions of the central design is almost always required. More technical to lay than with standard joints.

Important note: The use of standard corners is strongly recommended for more flexibility when laying.

For unique projects

Customised service for your most specific needs

We support you throughout your project, from basic computerised simulations through to projects that require the precision and know-how of mosaic specialists. Whether it be for a genuinely unique tiles, assemblies or mosaics, we employ our teams' creativity to design your product.

Extreme customisation

Thanks to our flexibility and traditional production methods, we can meet your format, texture, colour and thickness customisation requirements.

Ryans www.ryans.nl | Laag-Keppel

LAYING AND MAINTENANCE ADVICE

Phase 1: Check the tiles

To get a consistent result, open several boxes, take a few sheets without choosing and place them randomly (unless there is a specific design with numbered sheets). No claims will be accepted once the tiles have been laid. All claims must be made before laying has started.

Phase 2: Bonding

To correctly lay our tiles, they must be laid on a clean, perfectly smooth surface that is free of all infiltrated humidity, using a mortar that is suitable for the surface and for unglazed tiles.

Product to use: Adhesive mortar suitable for unglazed tiles.

Phase 3: Grouting

Once the mortar is perfectly dry, apply grouting suitable for unglazed tiles and leave to dry. This can be carried out in several steps to make sure the joints are properly filled (in particular to compensate for cement grouting shrinkage). Coloured and black grouting present a risk of staining the tiles and are not recommended.

Products to use:
Grey cement or epoxy grouting suitable for unglazed tiles.
(available at Winckelmans).

Phase 4: Clean the cement haze (24 hours after grouting)

The tiles are covered with a whitish haze immediately after being laid. This is usually excess haze from the cement used for grouting. This residue is cleaned off using acid products and a mechanical treatment.

Method:
- Sweep the surface and remove the most significant residue.
- Wet the joints.
- Spread the product over part of the surface area (zone treat ment). Leave to work for a few minutes.
- Rub the floor.
- Generously rinse with water (several times if necessary) to neutralise the product and collect the cement particles.

Products to use:
FILA DETERDEK PRO (Cement grout)
FILA CR 10 (epoxy grout)
(available at Winckelmans).

Phase 5: Apply stain prevention waterproofing

This step comes after the tiling has been laid and only on perfectly clean and dry tiles (it is essential to have cleaned off the cement haze beforehand). It is essential for highly exposed area such as showers or kitchen splashboards as well as for tiles laid outdoors in order to prevent staining products (grease, ink, etc.) from penetrating the pores. For the best protection, we recommend applying a new coat of waterproofing every 5 years.

Product to use:
Eco-friendly natural effect stain-resistant
FILA MP90 ECO XTREME
(available at Winckelmans).

REGULAR MAINTENANCE

The purpose of regularly maintaining tiles is to keep the tiling's original appearance for as long as possible. To achieve that, sufficiently regular cleaning is required. The choice of product and the water quality, which should preferably be soft, will have an effect on tile cleanliness. Usually, linseed oil or black soap based products, which are sources of floor soiling, should not be used.

Products to use:
Regular maintenance
FILA CLEANER PRO (DILUTION RATIO 1:200)
Special maintenance
FILA CLEANER PRO (DILUTION RATIO 1:30)
(available at Winckelmans).

Renewal:
Cleaning and removal of existing protection
FILA PS87 PRO
Stain-resistant natural effect ecological
FILA MP90 ECO XTREME
(available at Winckelmans).

Do not use: Black soap and linseed oil based products (they soil the tile) and HF hydrofluoric acid based products (they damage the tiles).

Recommended maintenance products

Important
The information below is intended as a recommendation only, and the choice of product to be used should always be confirmed by a professional installer. Winckelmans cannot be held responsible for problems caused by a choice of product that is not adapted to the specificities of a project or caused by the use of products that do not comply with the manufacturer's instructions.

1. CLEANING THE GROUT

AFTER INSTALLATION (CEMENT GROUT)

FILA DETERDEK PRO
dilution ratio: 1:5
consumption: 40 M2/1L

AFTER INSTALLATION (ÉPOXY GROUT)

FILA CR10
undiluted
consumption: 10 M2/1L

2. SEALING

Once the surface is dry

ENVIRONMENTALY-FRIENDLY STAIN PROTECTION

FILA MP90 ECO XTREME
undiluted
consumption: 30-50 M2/1L
1 coat

IMPORTANT NOTE:
Before the product is completely dry (about 10-15minutes), remove any residue by dabbing with a clean cloth

Please do not walk on the surface for 2 hours after applying the sealer.

3. CLEANING

DAILY CLEANING

FILA CLEANER PRO
dilution ratio: 1:200
consumption: 1500 M2/1L

SPECIAL CLEANING

FILA CLEANER PRO
dilution ratio: 1:30
consumption: 50 M2/1L

STAIN PROTECTION RENEWAL (TO BE PERFORMED EVERY 5 YEARS)

CLEANING AND REMOVAL OF THE EXISTING PROTECTION

FILA PS87 PRO
dilution ratio: 1:5
consumption: 30 M2/1L

ENVIRONMENTALY FRIENDLY STAIN PROTECTION

FILA MP90 ECO XTREME
undiluted
consumption: 30-50 M2/1L
1 coat

IMPORTANT NOTE:
Before the product is completely dry (about 10-15minutes), remove any residue by dabbing with a clean cloth

Please do not walk on the surface for 2 hours after applying the sealer.

UPEC RATINGS

UPEC rating presentation

Most of our tiles have a UPEC rating making it possible to identify the technical specifications and compatibility depending on different uses. This UPEC rating, which is optional and obtained through a voluntary approach, is intended to guide professionals in their flooring recommendations.

Premise and product rating

Every housing, commercial or public (such as stations, airports, hospitals) building has a UPEC rating broken down as follows:

– **U**: indicates the wear caused by walking and standing resulting in abrasion, soiling, scratching or a change in surface appearance.
The U rating varies from 2 (least resistance) to 4 (very high resistance suitable for public areas, shopping malls, station halls, etc.).

– **P**: indicates the mechanical effects due to the presence, movement and use of static or mobile furniture and the risk of more or less heavy falling items.
The P rating varies from 2 (premises in which falling items are occasional and low intensity) to 4s (highest resistance).

– **E**: indicates the tiling performance in contact with water, in particular relative to handling and maintenance activities.
The E rating varies from 1 (occasional presence of water) to 3 (frequent and/or extended presence of water).

– **C**: indicates the resistance to domestic chemical and staining agents that can have an impact on durability and can, for example, cause indelible stains.
The C rating can vary from 0 (minimum risk environment but never risk-free) to 2 (frequent contact with chemical or staining products).

The “Notice sur le Classement U.P.E.C. des locaux” document (Cahiers du CSTB n° 3782), can be viewed at the following address https://evaluation.cstb.fr/doc/classement/upec/e-cahier-3782-v2.pdf, and gives a summary of all the premise rating tables.

The detail of our UPEC ratings is available online at https://webapp.cstb.fr/upec-ceramique/

Ryan's www.ryans.nl | Laag-Keppel

IMPORTANT INFORMATION

Size variations
Our unglazed tiles are non-rectified, dry pressed and have a low water absorption rate. Our tile sizes can therefore vary according to tolerances determined by recognized standards (NF EN 14411 standard and French Cahiers du CSTB in force). Adjustments may be necessary during installation due to these dimensional tolerances, and a grout width of 2 to 3mm must be planned for all tiles supplied loose.

Non-modular tiles
Our tiles are non-modular, which means the different formats we offer are not designed to align automatically in standardized layouts with consistent grouts. However, they can be combined in specific designs, especially for creating Victorian-style floor patterns laid edge to edge, without visible grout. This type of layout requires meticulous installation and special attention to dimensions and layout planning, and it is not suitable for every project.

Storage conditions
Tiles, especially those assembled on mesh, must be stored in a dry environment and away from any source of moisture. Improper storagecan cause irreversible tile detachment before installation.

Grouting recommendations
It is strongly recommended to plan for a 2 to 3mm *(5⁄64" to 1⁄8")* grout space between the different tiles which should be filled with a grey cement based grouting product. Coloured grouting products (in particular black) are strongly advised against due to the risk of stains.

Use of a sealer product
This operation must be done after the tiles have been installed and only on perfectly clean and dry tiles (with all cementitious grout haze removed). It is necessary for all highly exposed areas such as showers, kitchen splashbacks and for all outside projects to make sure no stain appears over time.

Outdoor use
Our tiles are perfectly suitable for outdoor use (hot or cold and dry or wet environments). Refer to the technical data sheet for more information.

Shade variation
As our tiles are made from natural materials, slight shade variations may occur between different production batches of the same colour. Consequently, we cannot guarantee exact colour matching in the event of a reorder to complete a project. As accessories and tiles are produced differently, slight variations in shade may be noted.

Samples
We supply samples to help you make your choice. Feel free to contact us to get a colour chart or a specific sample. Sample shades, even though close, may vary slightly compared to the delivered product (see Tile colours and shades above).
